

Interactive Police/School Safety & Security (IPSSS) Initiative

Secure, See, Save

Trinus Technologies Inc. are introducing an Voice / Video over IP (VoIP) **Interactive Police/School Safety & Security** initiative.

Advantages

- Student safety is increased.
- Emergency responders identify the threat sooner.
- Emergency responders engage the threat sooner.
- Faculty have knowledge of safe zones during an intrusion.
- Emergency responders have audio and video monitoring at their staging center.
- Entrance to the educational facility is based on facts .

Immediate Dangers

Anyone who keeps abreast of the latest threats to educational facilities understands that our school grounds and **classrooms are vulnerable**. There are a great number of steps that can be taken to improve "access control", however, if a predator or deranged individual is motivated enough – no educational facility can prevent intrusion. Once the threat is in the building, then immediate action must be implemented to secure the safety and evacuation of the innocents.

"if a predator or deranged individual is motivated enough – no educational facility can prevent intrusion!"

Law enforcement officials have labelled these type of scenarios as "**active shooters**" requiring "urgent threat intervention". When responding to a call for help from an educational establishment, police need **rapid intelligence** on the location and capabilities of the predator.

The objective of the first responders is to seek out the violent intruder and take aggressive action to stop the grievous acts. Unfortunately, during times of crisis, the information on the **whereabouts** of the perpetrator and the status of his/her armament **is often sketchy**. School officials do not always have the luxury of communicating direct with the police officers responding or the dispatchers.

How Does IPSSS Work? (secure, see, save— Safe SOLUTION!)

Incorporating the latest technology of VoIP (voice over IP) audio communications, Trinus Technologies Inc. install a network of digital cameras and audio intercoms within the school. The “pipeline” which houses the audio and video communication feed can “piggy back” on an existing computer network. Unlimited faculty may have access to the images in their classrooms or it can be restricted to more secure areas, such as the Principals office. The local police service is provided with the IP address and passwords for the school computer network. **In the case of any emergency, local police can log onto the system and monitor the images displayed on the cameras. First responders, equipped with a laptop, can also access the images at their staging area, or out front of the school, via a wireless conduit.** Audio pickups may be installed with the cameras to permit the monitoring of any voice communication or sounds. The communication can be configured to be interactive. The option exists for the school, or the educational board of governance, to record video images and archive the images for future reference to mitigate vandalism or other forms of property damage or injury.

Bradley Siddell, ISS Manager

Heading the

Intelligence Support Services Division is Inspector (RET) Bradley Siddell. He brings with him 25 years of decorated law enforcement, emergency operations, major crimes investigation, criminal intelligence, technical operations, analysis, and national security experience. Prior to joining the Trinus Technologies team, Bradley was the **Director of National Security** for the **Royal Canadian Mounted Police** in the Province of Alberta, Canada. He has a passion for information and intelligence management strategies, incorporating technology with technical support, software development, training, and consultation services.

Bradley leads the ISS team of dedicated IT professionals who stand ready to deliver and support a host of services within their realm of expertise.

Expertise

- Major Case Management
- Intelligence Management
- Integrated Intelligence Operations
- Risk and Threat Assessment
- VIP Protection
- Crisis Negotiation
- Incident Command and Control
- National Security

“Bradley Siddell brings with him 25 years of decorated law enforcement experience, including that of a SWATT Commander and Hostage Negotiator.”
